[57] **ABSTRACT**

A partition system for use in defining selected areas within a larger space includes a plurality of upstanding support posts arranged in spaced relation and each having mounting structure thereon adapted to receive and retain thereon spaced locking portions of respective end edge members mounted on respective wall panels. The mounting structure has a plurality of longitudinally extending and circumferentially spaced ribs each adapted for cooperative locking engagement with a respective one of the locking portions of a respective one of the end edge members.
